Detailed Feature List

The table below summarizes all the features developed as part of this new release and lists out the corresponding user story reference numbers.

3.9	- Public REST API - Remote Display-Equipment web page integration into the Dashboard - Scan enhancements
3.10	- Integration of a customizable representation at the equipment level - Integration of remote actions in the diagrams - Integration of information and status in the diagrams (e.g. switch positions)
3.11	- Diagrams enhancements (save binds & synoptics settings during versions upgrades)
3.12	- Languages add - Drivers update
3.14	- KYBIO SaaS
3.15	- Drivers' enhancements
3.16	- Driver's encryption - Languages add - Remote display with EdgeBot
3.17	- Diagrams enhancements - Ubuntu 20.04 - Debian 9 & 10 - Drivers update
3.18	- Diagrams enhancements (multibinds)
3.22	- Integration of the second email address per user
3.24	- Granularity per hour in the Analytics
4.0	- Protocol Agnostic - Unit discovery new page - Simultaneous scan - Scan settings enhancements
4.1	- Push alarms management - SYSLOG and SNMP traps drivers
4.2	- Maintenance mode – Alarms on-hold in the Analytics
4.3	- Freemium - WMI driver enhancements - Linux & MacOS driver

4.4	- Integration of NoSNMP remote actions - Drivers enhancements
4.6	- New Product page (drivers) - Modbus driver - Analytics, Scan and Monitoring Settings optimizations
4.7	- Kybio Northbound Interface - SMS notifications software only (Twilio integration) - Self-monitoring - Standard dynamic representations integrated by default for all Ecreso transmitters
4.8	- Silos creation for KYBIO New Pricing model based on Optional modules
4.9	- SAML 2.0 and Azure AD integrations
4.10	- New rules for Passwords strengthening - LDAPS implementation - Self-monitoring of the sub-instances related to the Northbound Interface
4.11	- Fixing autobind feature - Monitoring scalability optimization - Twilio SMS fix for configuration
5.1	- DrawIO embedded to design custom diagrams - Rebuilt Dashboard to customize multi-level views - Increase of the monitoring granularity level, with the perspectives management, which allow the monitoring by "service" (channel, station, site, etc.) - Automation Module
5.2	- Optimization of monitoring scheduler - Ping management now changed to one by unit - Redundancy option update - Improvements and bug fixes
